Step 1:

Slide the **Short Teeter Totter Section** into slot in the **Long Teeter Totter Section** and secure using two **2" Wood Screws**.

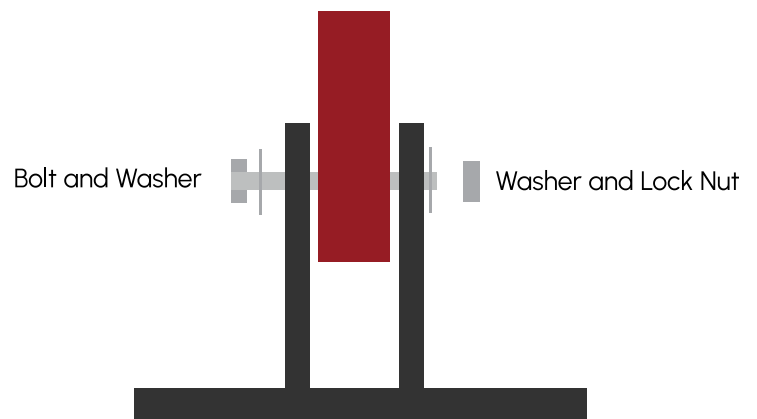

Insert into slots with recessed holes for bolts facing out. Secure with wood screws through bottom.

Step 2:

Secure **Triangle Base Pieces** to **Square Base Piece** by placing into slots. The indentations on the triangle piece for the bolt head should face away from each other when both are in place. Secure using six **3" Wood Screws** through pre-drilled holes in bottom of **Square Base Piece**.

Step 3:

Using the **4-3/4" Bolt** with **1/2" Zinc Washers** and **1/2" Nylon Lock Nut**, secure the Teeter Totter to the base using the desired hole locations. Hand tighten the lock nut, then use the socket/wrench to tighten one turn more.

IMPORTANT:

Over tightening the nut may affect the action of the Teeter Totter.
